Trouble Shooting Tips

If your solar light does not come on at dusk despite following all instructions please try the following steps:

1. Make sure that the solar light is not affected by any other light source.
2. Ensure the solar light does not stand in the shade all day.
3. Make sure the switch is in the ON position.
4. Check to see if the battery is installed correctly.
5. If there is a protective film on the solar panel carefully remove this.

Care Information

1. Clean any dirt and debris from the solar panel. The panel cannot recharge if the light is obstructed. Use a soft cloth to clean the panel. Do not use abrasives or chemicals that might scratch or damage the UV coating.
2. In a region where snow and ice are likely and the light assembly is covered with snow for an extended period of time the batteries will require a recharge for at least 8 hours.

Battery Installation and Replacement (Con't)

Caution: Always dispose of recyclable batteries at a proper disposal facility. Do not dispose in fire or attempt to open sealed batteries. Use only the similar rating and type that was shipped with the original light.

- Always purchase the correct size and grade of battery most suitable for intended use.
- Replace battery of a set at the same time.
- Clean the battery contacts and also those of the device prior to battery installation.
- Remove battery from equipment which is not to be used for an extended period of time.
- Remove used battery promptly.

Modifications not approved by the party responsible for compliance could void user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Model No.: 17000

Trade Mark: FUSION

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Overview

This product is designed to the highest technical specifications and standards. It will supply years of maintenance free use. Please read these instructions thoroughly prior to installation, then store in a safe place for future reference. If at any time you are unclear about this product, or require further assistance please do not hesitate to contact our trained professionals operating the customer support line at 1-877-615-1378 Monday to Friday between the hours 8:30 AM to 5:00 PM Eastern Standard Time or email sales@fusionproducts.ca

About Your Solar Light

During the day your solar panel will convert the sun's light and/or UV rays into electrical power that will charge the rechargeable battery. When it becomes dark, the solar light will turn on using the power stored on the rechargeable battery as it will detect no day light. The units light output strength and time depends on how many hours and how much sunlight and/or UV rays your panel absorbs throughout the day.

For maximum output place the solar panel in an area where there is direct sunlight for at least 8 hours in a given day. Do not install your solar light in a shaded area. The selected location should not be near night time light sources such as; porch lights, street lights or pool lights as these may cause the solar light to turn off prematurely.

Getting Started

Please do not throw away any packing material until all parts are verified as present.

IMPORTANT

- Fully charge the battery for the lights before first use. Charge the solar panel under direct sunlight in the OFF position for 2 days.
- For best results, locate your solar light in a position where it can get direct sunlight and generally free from cover and shade.
- Keep your solar lights away from other night-time light sources, such as streetlights.
- Make sure the solar panels are not covered by dust, snow and debris. Clean it with a soft damp cloth or paper towel periodically. Avoid the use of abrasive cleaning agents.
- Use only solar rechargeable AA batteries for your solar lights. Replace batteries with the same size each year for optimum performance.

Operation

1. For daily/ normal operation, ensure the switch is turned to the ON position. The lights will automatically turn on during the night time after an initial full 2 sunny days in the OFF position.
2. Be sure to allow the battery for the lights to fully charge in the OFF position for 24-48 hours before first time use and after battery replacement.
3. The performance of the solar light will vary with the time of year. It will deliver more light when it has had a full day in the sun rather than a day in overcast weather.

Battery Installation and Replacement

Replacing the Solar Battery

1. Ensure the switch is in the OFF position on the bottom of the solar panel housing.

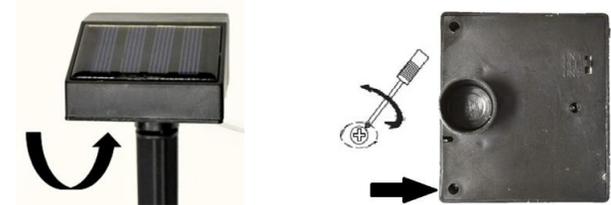

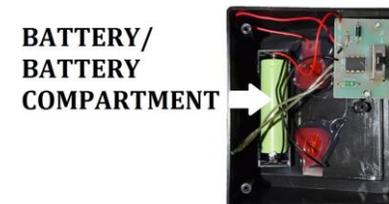

Fig. 1

2. As indicated by the arrow, locate the 3 screws and carefully remove using a phillips screwdriver (Fig. 1).
3. Once all 3 screws are removed, carefully remove the bottom cover/battery compartment cover from the unit, being careful not to detach any of the wires.

Fig. 2

4. Carefully remove the old battery from the battery compartment (Fig 2.)
5. Replace battery with equivalent new solar rechargeable AA battery, ensuring the correct polarity is observed.
6. Reassemble the unit by reversing the above procedure.
7. Allow the unit to fully charge for up to 2 days in the OFF position. Once fully charged turn the switch to the ON position and the solar light will turn on automatically when it becomes dark.
